

A remote control electric operator is a significant benefit that not only provides the convenience of being able to open and close your garage door from the comfort of your car but can also improve the security of your door. This information sheet is a guide to the quality and standards you can expect.

## **The quality check**

- Before having a remote control operator installed, you need to ensure that the installing company is able to comply with the requirements of current UK law relating to electric operators installed to domestic garage doors.
- All power operated garage doors must be CE marked after installation and commissioning, check that the proposed installer knows this and is able to provide a legal CE mark and a Declaration of Conformity.
- Also check that he is aware that a switched socket outlet must be installed adjacent to the motor head in such a position that the factory fitted lead and plug and be connected without any wiring alteration being required.

## **THE FACTS**

When an electric operator is installed to a garage door the whole power operated door assembly becomes a machine and as such the installed product has to fulfil the requirements of the UK Supply of Machinery (Safety) Regulations.

## **THE ELECTRIC OPERATOR**

There is a range of operators on the market from basic "no frills" units to more sophisticated units.

The most important factor is that the operator must have a Declaration of Incorporation which clearly identifies which type and size of garage door it is designed to drive in a safe manner and should list any additional safety devices which may be necessary.

While automatic reversal upon fitting an obstruction should be a feature on all operators, it may not be so. We strongly recommend that an additional safety control, such as photocells or a bottom rail safety edge is also installed. These safety devices will help to minimise damage or injury. However, please remember a power operated door must be used sensibly and safely at all times.

## **THE INSTALLER**

In order to comply with UK legal requirements the installing company

- is required to ensure and confirm that both the door and operator are compatible with each other by means of Declarations of Incorporation
- should provide training to ensure that installers are competent to carry out a safe installation
- is responsible for attaching a permanent CE mark to the power operated door
- issues to the client a Declaration of Conformity for the power operated door
- must maintain a technical records file

**FOR YOUR PROTECTION ensure that whoever installs your electric operator is both willing and able to fulfil the legal requirements – if they are not, do not use them**

**Member companies of the DHF Garage Door Installer and Distributor Group CAN and WILL install your operator SAFELY and LEGALLY**

Membership of the Door & Hardware Federation offers a guarantee of customer advice, care and assurance, unsurpassed in the industry, and is supported by all the leading manufacturers.

Use of this leaflet does not constitute proof of membership of the DHF. Look for the logo and ask to see a current membership certificate or check our website.
